REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

A review of Applicant's arguments in the Paper filed 12/3/2009 and a review of the instant claims has convinced the examiner that the claims are allowable over the applied prior art of record.

2. Regarding independent claim 1 and the dependent claims, the prior art fails to teach or suggest a dry fractionation method of fat or oil which comprises the steps of: fractionating fat or oil (A) containing G2U and GU2 through crystallization/solid-liquid separation into a cake of a crystal fraction of concentrated G2U (AF) and a liquid fraction of concentrated GU2 (AL), crushing the crystal fraction (AF) and mixing the crushed fraction with liquid G2U-containing fat or oil (B) whose GU2 concentration is lower than that of the liquid fraction (AL), and then separating the mixture into a crystal fraction (BF) and a liquid fraction (BL), wherein G represents a saturated or trans acid form fatty acid residue, U represents a cis form unsaturated fatty acid residue, G2U represents a triglyceride of two G-residues and one U- residue bonded together, and GU2 represents a triglyceride of one G-residue and two U-residues bonded together, and wherein the fat or oil (A) is vegetable butter or a middle-melting point fraction thereof, interesterified oil obtained by selectively introducing a saturated fatty acid to 1,3-positions of fat or oil which is rich in oleic acid at the 2-position, or isomerized hydrogenated oil.
3. The closest prior art of Higuchi et al. (JP-258994 A) teaches a method of chilling middle-melting and low-melting component palm oil with a low melting point stream of

palm oil added to the middle-melting and low-melting components prior to filter pressing the solid fraction, however, fails to expressly teach a dry fractionation method of fat or oil which comprises the steps of: fractionating fat or oil (A) containing G2U and GU2 through crystallization/solid-liquid separation into a cake of a crystal fraction of concentrated G2U (AF) and a liquid fraction of concentrated GU2 (AL), crushing the crystal fraction (AF) and mixing the crushed fraction with liquid G2U-containing fat or oil (B) whose GU2 concentration is lower than that of the liquid fraction (AL), and then separating the mixture into a crystal fraction (BF) and a liquid fraction (BL), wherein G represents a saturated or trans acid form fatty acid residue, U represents a cis form unsaturated fatty acid residue, G2U represents a triglyceride of two G-residues and one U- residue bonded together, and GU2 represents a triglyceride of one G-residue and two U-residues bonded together, and wherein the fat or oil (A) is vegetable butter or a middle-melting point fraction thereof, interesterified oil obtained by selectively introducing a saturated fatty acid to 1,3-positions of fat or oil which is rich in oleic acid at the 2-position, or isomerized hydrogenated oil.

4. The secondary references of record do not teach or suggest the combined limitations not taught by Higuchi et al. (JP-258994 A).
5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
